

Agency Priority Goal Action Plan

Meet New Statutory Requirements to Improve the Safety of Chemicals in Commerce

Goal Leader:

Jeff Morris, Director, Office of Pollution Prevention and Toxics

Deputy Goal Leader:

Mark Hartman, Acting Deputy Director for Management, Office of Pollution Prevention and Toxics

Overview

Goal Statement

- **Meet new statutory requirements to improve the safety of chemicals in commerce.** By September 30, 2019, EPA will complete in accordance with statutory timelines (excluding statutorily-allowable extensions): 100% of required EPA-initiated Toxic Substances Control Act (TSCA) risk evaluations for existing chemicals*; 100% of required TSCA risk management actions for existing chemicals; and 80% of TSCA pre-manufacture notice final determinations.

Challenges

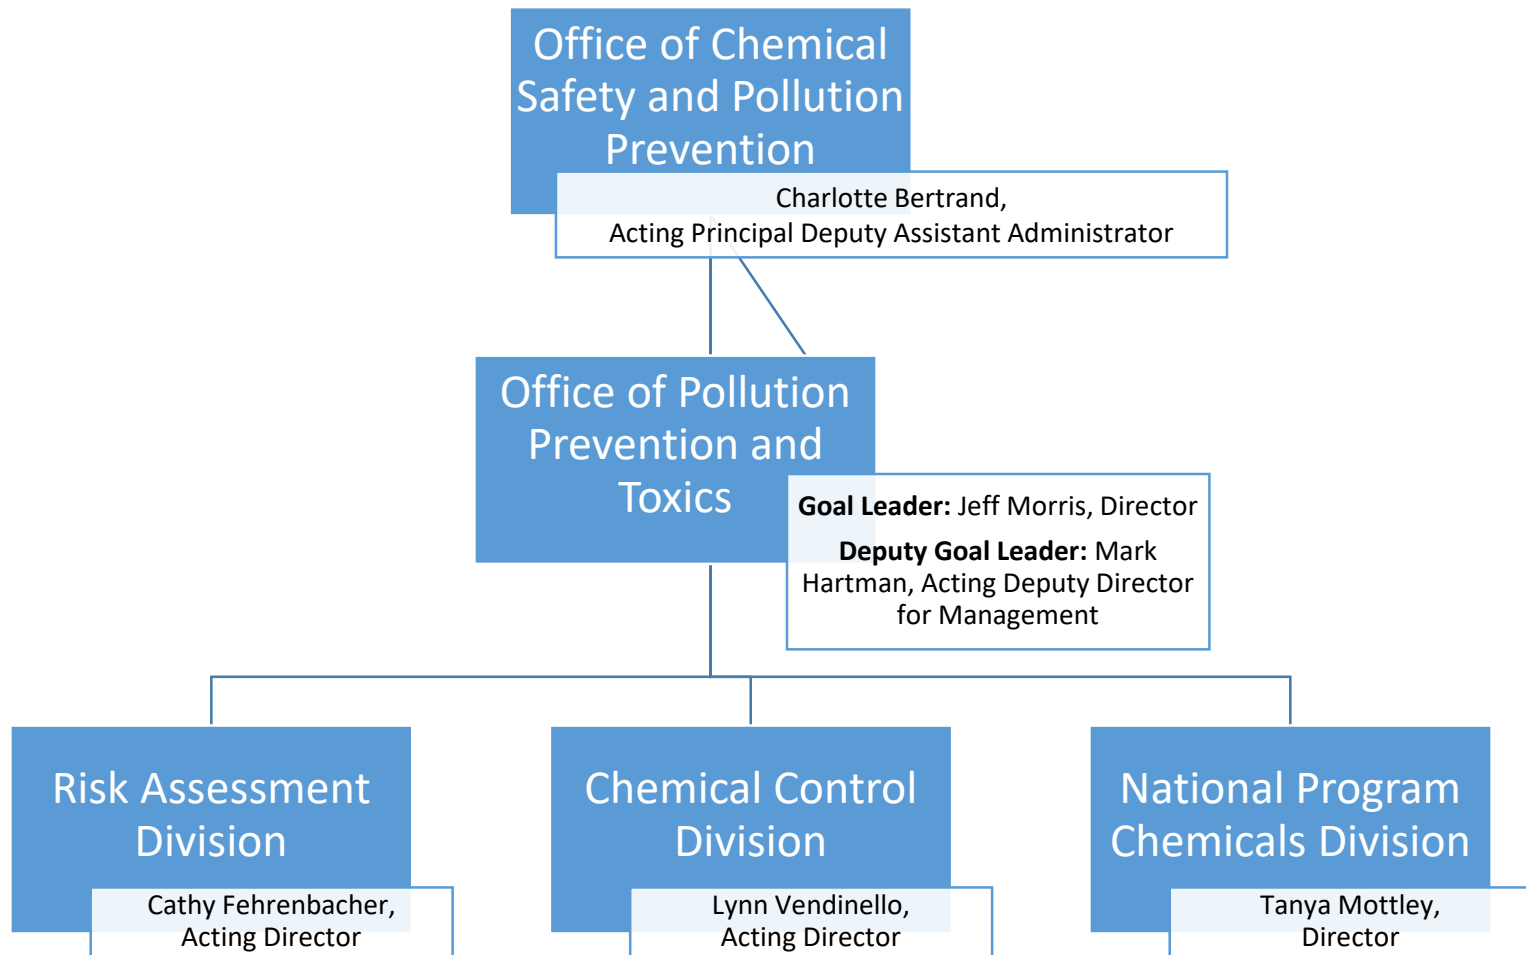

- Risk Evaluations: The TSCA amendments enacted in 2016 established tight deadlines for technically complex chemical reviews that must adhere to high scientific standards, resulting in increased demands on staff and contractor support.
- Risk Management Actions: Similarly, TSCA amendments established tight deadlines for completion of regulatory actions to address any unreasonable risk identified through risk evaluations.
- New Chemicals: TSCA amendments established more stringent standards for review, including a new requirement for EPA to make an affirmative finding on the safety of a new chemical or significant new use of an existing chemical before chemical/use is allowed into marketplace.

Opportunities

- All Goal Indicators:
 - EPA has stronger authority under TSCA, as amended, to carry out its statutory responsibilities to ensure the safety of existing chemicals in commerce and new chemicals before commercialization, leading to significant further reductions in health and environmental risks.
 - Lean projects will provide opportunities to improve program efficiency in a number of programs.
- New Chemicals: In particular, New Chemicals Lean recommendations will help streamline new chemical review and expedite completion of final determinations for pre-manufacture notices (see slide 6).

*The statutory deadline for completing the first 10 existing chemical risk evaluations is December 19, 2019. Through September 30, 2019, EPA will track progress toward meeting its milestones for completing the risk evaluations by the statutory deadline.

Leadership

Goal Structure & Strategies

Indicator 1 – Risk Evaluation*:

- EPA will employ systematic, science-based risk evaluations to determine whether exposure to a high-priority chemical poses unreasonable risk to human health or the environment.
- To meet the goal of timely completion of all required risk evaluations, EPA will --
 - Maximize use of existing EPA tools, such as ORD's Health and Environmental Research Online Database and commercially available tools such as Distiller, to assess and make use of available data;
 - Employ systematic review approach in chemical prioritization and evaluation processes to ensure accurate identification of high-priority chemicals;
 - Monitor progress of risk evaluations through OPPT Project Management Tool (PMT);
 - Conduct regular Senior Leadership Team status reviews; and
 - Explore use of software to automate the review, processing, and categorization of information.

*The statutory deadline for completing the first 10 existing chemical risk evaluations is December 19, 2019. Through September 30, 2019, EPA will track progress toward meeting its milestones for completing the risk evaluations by the statutory deadline.

Goal Structure & Strategies

Indicator 2 – Risk Management Actions:

- To address any unreasonable risk identified through a risk evaluation, EPA will pursue risk management action (regulatory action) under TSCA as needed so that the chemical substance or mixture will no longer present such risk.
- To meet the goal of timely completion of all required risk management actions, EPA will --
 - Develop comprehensive, high quality risk assessments as part of risk evaluation process to meet the needs of future risk management actions, minimizing need for additional evaluation as part of rule development;
 - Conduct early consultations prior to formal completion of risk evaluations to begin identifying risk management actions;
 - Monitor progress through Action Development Process (ADP) Tracker and OPPT Project Management Tool (PMT); and
 - Conduct regular Senior Leadership Team status reviews.

Goal Structure & Strategies

Indicator 3 – New Chemicals:

- EPA will enhance and streamline its new chemical review process to meet the more stringent requirements of the TSCA amendments, expedite completion of pre-manufacture notice reviews, and thus ensure the safety of new chemicals that enter commerce.

- To meet the goal of timely completion of final determinations for pre-manufacture notices, EPA will –
 - Implement recommendations from 2018 Lean event to reduce the time needed for risk assessment process:
 - ✓ Employ team-based processing;
 - ✓ Improve CBI Local Area Network (LAN) system performance;
 - ✓ Improve electronic communication with submitters; and
 - ✓ Improve and align organizational structures.

 - Develop, enhance, and apply new electronic workflow system for expediting management of incoming submissions and continue to introduce technical improvements.

 - Continue to implement policy changes:
 - ✓ Institute a robust pre-submission program to aid companies to improve PMN submissions;
 - ✓ Allow timely amendments by submitters to refine intended conditions of use; and
 - ✓ Consider Significant New Use Rules (SNURs) when there are concerns with reasonably foreseen uses that are not intended conditions of use.

Goal Structure & Strategies

EPA Lean Management System (ELMS)

- EPA will use the deployment of the new EPA Lean Management System (ELMS) to achieve the results set forth in the Strategic Plan. As part of ELMS, EPA will conduct multi-day process improvement events to make significant progress in priority areas identified in the Strategic Plan, including this one.
- Visual management will then be used to ensure that improvements from the events are achieved and sustained over time. Poster boards with regularly updated performance data will serve as visual management for monitoring progress towards meeting the targets in the Strategic Plan, while additional poster boards will track the flow of the work needed to achieve the targets. Managers and staff members will participate in weekly stand-up huddle meetings in front of their visual management boards to discuss the performance and flow of the process.
- In addition, National Programs and Regional Offices will hold monthly business reviews to go over both the strategic measures tracked on scorecards, and the implementation plans that track progress on Strategic Plan and priority area projects identified for EPA under President Trump's Executive Order on a Comprehensive Plan for Reorganizing the Executive Branch. The Administrator will hold quarterly reviews to monitor overall progress on the agency's Strategic Plan and priority area projects.
- ELMS is designed to make sure that EPA is regularly monitoring progress towards meeting the targets set forth in the Strategic Plan, and taking immediate action if expected performance is off track.

Status of Existing Chemical Risk Evaluations

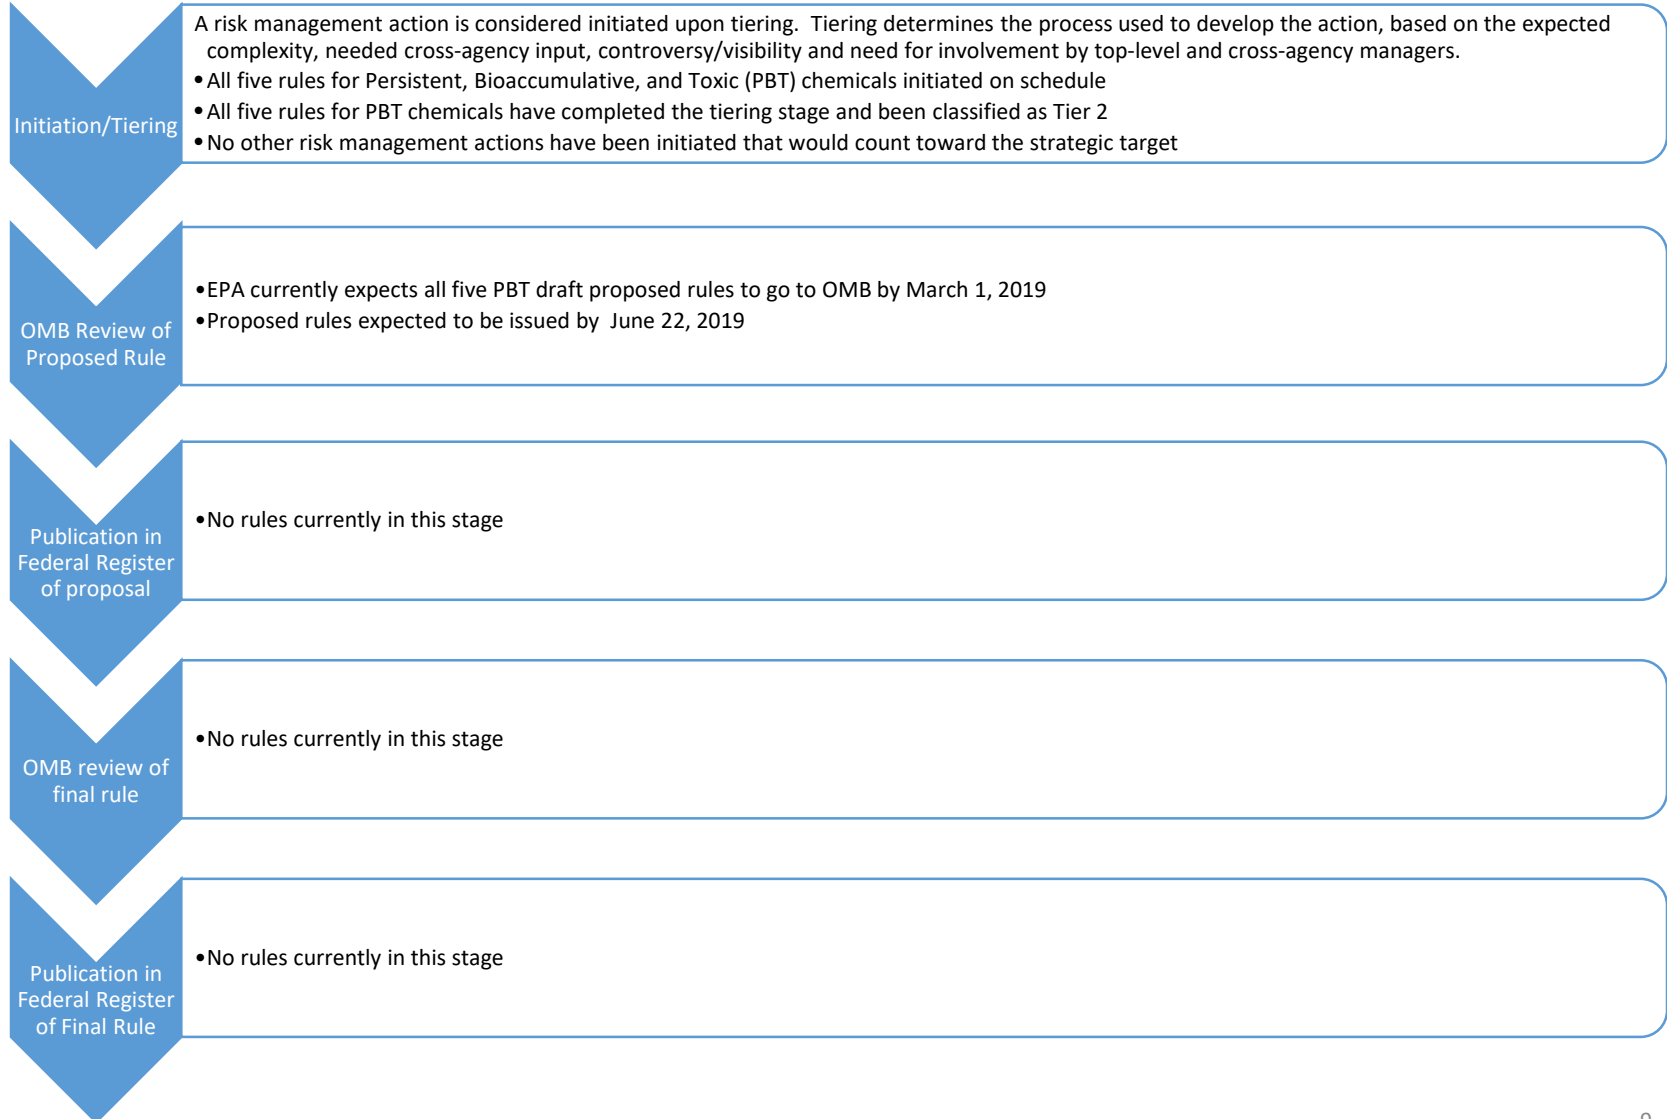

For each step in the process, completion is defined as publication of the document in the Federal Register.⁸

Summary of Progress – FY 2018 Q1

- **Indicator 1: Risk Evaluations:**

- On track to meet 100% APG target to meet 3-year statutory deadline (12/19/19, without extensions) for the 10 initial risk evaluations
- Statutorily-required scoping documents published on-time for all 10 chemicals
- Problem formulation documents to further refine scope targeted for March 2018 publication
- On-track progress continues on data gathering and analysis for fate, exposure, health and ecological hazard assessments needed to complete draft and final risk evaluations within or ahead of statutory timelines

- **Indicator 2: Risk Management Actions:**

- On track to meet 100% APG target to issue proposed rules for all five Persistent, Bioaccumulative and Toxic (PBTs) Chemical actions within the 3-year statutory timeline (without extensions): June, 2019
- Future APGs may focus on risk management actions for chemicals determined through a risk evaluation to pose unreasonable risk under TSCA

- **Indicator 3: New Chemicals:**

- On track to meet FY 2019 target of 80% to complete TSCA pre-manufacture notice final determinations within statutory timelines (90 days, without extensions), including Pre-Manufacture Notice (PMN), Significant New Use Notice (SNUN) and Microbial Commercial Activity Notice (MCAN) reviews
- Program continues to make progress towards long-term goal to complete 100% of reviews within statutory timelines (without extensions), with a Lean project occurring in FY 18 and Lean recommendations and other improvements implemented through FY 2019
- In FY 2017, 11.7% of all final determinations made within 90-day base review period

Summary of Progress – FY 2018 Q2

- **Indicator 1: Risk Evaluations:**

- On track to meet 100% APG target to meet 3-year statutory deadline (12/19/19, without extensions) for the 10 initial risk evaluations
- Statutorily-required scoping documents published on-time for all 10 chemicals
- Problem formulation documents to further refine scope targeted for May 2018 publication
- On-track progress continues on data gathering and analysis for fate, exposure, health and ecological hazard assessments needed to complete draft and final risk evaluations within or ahead of statutory timelines

- **Indicator 2: Risk Management Actions:**

- On track to meet 100% APG target to issue proposed rules for all five Persistent, Bioaccumulative and Toxic (PBTs) Chemical actions within the 3-year statutory timeline (without extensions): June, 2019
- Future APGs may focus on risk management actions for chemicals determined through a risk evaluation to pose unreasonable risk under TSCA

- **Indicator 3: New Chemicals:**

- Efforts continue to meet FY 2019 target to complete 80% of TSCA pre-manufacture notice final determinations within statutory timelines (90 days, without extensions), including final determinations for Pre-Manufacture Notice (PMN), Significant New Use Notice (SNUN) and Microbial Commercial Activity Notice (MCAN) reviews
- To help streamline new chemical review, EPA will implement recommendations from 2018 Lean project and other efficiency improvements through 2019
- In FY 2018 Q2, 3% of all FY 2018 final determinations were made within 90-day base review period

Summary of Progress – FY 2018 Q3

- **Indicator 1: Risk Evaluations:**

- On track to meet statutory requirements for timely completion of final risk evaluations
- Statutorily-required scoping documents published on-time for all 10 chemicals
- Problem formulation documents to further refine scope released for public comment 6/1/18
- On-track progress continues on data gathering and analysis for fate, exposure, health and ecological hazard assessments needed to complete draft and final risk evaluations within or ahead of statutory timelines

- **Indicator 2: Risk Management Actions:**

- On track to meet 100% APG target to issue proposed rules for all five Persistent, Bioaccumulative and Toxic (PBTs) Chemical actions within the 3-year statutory timeline (without extensions): June, 2019
- Future APGs may focus on risk management actions for chemicals determined through a risk evaluation to pose unreasonable risk under TSCA

- **Indicator 3: New Chemicals:**

- Ability to meet FY 2019 target of 80% to complete TSCA pre-manufacture notice final determinations within statutory timelines (90 days, without extensions), including Pre-Manufacture Notice (PMN), Significant New Use Notice (SNUN) and Microbial Commercial Activity Notice (MCAN) reviews, will depend upon successful implementation of Lean effort, hiring and training new staff to perform this critical work, and finalizing policy decisions that impact key aspects of the program.
- Efforts continues to improve performance on completing pre-manufacture notice reviews within statutory timelines (without extensions), with a Lean project occurring in FY 18 and Lean recommendations and other improvements implemented through FY 2019.
- Efforts underway to derive lessons learned from cases that have been completed within 90 days and apply to current review processes.
- Significant recruitment and hiring effort is underway to fill key vacancies in the new chemicals program. More than 12 new hires have been made and more are in the queue. Training new staff is also underway.
- In FY 2017, 11.7% of all final determinations made within 90-day base review period. In FY 2018, cumulative figure for Q1-Q3 is 3.8%, and zero percent for Q3. However, EPA has made all final determinations in accordance with regulatory provisions that allow for the agency and submitter to agree to voluntary suspensions pending receipt of additional information.

Key Milestones

- OPPT's strategy for meeting performance measure deadlines is to make system enhancements, in particular for tracking New Chemical reviews and Risk Evaluations. The New Chemical Review Application will allow for electronic transmission of TSCA Section 5 data from the EPA Central Data Exchange. The Project Management Tool (PMT) tracks progress of risk evaluations towards completion within statutory timelines.
- The New Chemical Review application (NCR), deployed to production in early December, replaced the PMN Gold system in April 2018 after phase-in period. OPPT has developed several reports in the PMT for tracking project deadlines.

Milestone Summary

Key Milestone	Milestone Due Date	Milestone Status	Change from last quarter	Owner	Comments
<i>Risk Evaluations</i>					
Scoping Documents completed	6/22/17	Completed	No Change	RAD	Statutory deadline
Problem Formulations completed for first 10 Chemicals	May 18	Completed	Changed from "On Track"	RAD	All 10 released for public comment June 1
<i>Risk Management Actions</i>					
Action Development Process tracker for risk management actions under further development	N/A	Completed	Changed from "On Track"	EPA	Lotus Notes system to be replaced end of December 2017.
Issuance of Proposed Rules for PBTs	6/22/19	On-Track	No Change	CCD	Statutory deadline is 3 years from date of enactment
<i>New Chemicals</i>					
New Chemical Review Application, Release 1	12/8/17	Completed	No Change	IMD	Replaced PMN Gold system
Enhancements to New Chemical Review application	4/9/18	Completed and Ongoing	No Change	IMD	NCR now primary tool for managing new chemical reviews; enhancements will improve workflow efficiency
Two-Way Communication Feature Deployment	6/1/18	Completed and Ongoing	Changed from "On Track"	IMD	Recently completed for TSCA Sec. 8(e) submissions and Notices of Deficiency. Will continue to replace paper communications with electronic transmissions for specific types of TSCA submissions as new features are deployed.

Key Indicators: New Chemicals

Percent of PMN, SNUN, and MCAN Final Determinations Completed within 90 days
(Targets and actuals cumulative from start of FY 2018)

Data Accuracy and Reliability

EPA-initiated TSCA risk evaluations for existing chemicals:

- OPPT Project Management Tool (PMT) will be used to monitor status of risk evaluations with respect to statutory timelines. APG results based on simple counting and division.
- Completion of risk evaluation defined in terms of publication in the Federal Register.
- A Data Quality Record has been developed for the strategic measure associated with this activity: <https://www.epa.gov/sites/production/files/2018-05/documents/dqr-1-4-risk-evaluation.pdf>.

TSCA risk management actions for existing chemicals:

- ADP Tracker will be used to monitor status of risk management actions with respect to statutory timelines.
- Completion of a risk management action defined as publication of final rule in the Federal Register.
- A Data Quality Record has been developed for the strategic measure associated with this activity: <https://www.epa.gov/sites/production/files/2018-05/documents/dqr-1-4-risk-management-actions.pdf>.

TSCA Pre-manufacture notice final determinations for new chemicals:

- OPPT NCR tool will be used to monitor status of pre-manufacture notice reviews with respect to statutory timeline. APG results determined by aggregation of data for PMNs, SNUNs, MCANs and simple division.
- NCR has now replaced PMN Gold as the primary tool for managing new chemical reviews. Additional enhancements will improve workflow efficiency; enhancements will continue to be deployed on a rolling basis through 9/30/18 and continue into FY19.
- A Data Quality Record has been developed for the strategic measure associated with this activity: <https://www.epa.gov/sites/production/files/2018-05/documents/dqr-1-4-new-chemicals.pdf>.

APG-Wide:

- No significant data limitations expected; minimal chance of error in reporting performance results.
